# FLEXICOMB CONCEPT

## **NEXT generation's packing solution!**

• WALLTEC PLEXIPAC AB

### FLEXICOMB CONCEPT

- Intelligent Packaging Solutions
- Flexible Packaging Solutions
- Eco-Friendly Packaging
- 🔵 Just-in-time
- Recyclable Packaging
- Efficient Packaging
- **User friendly**
- High speed

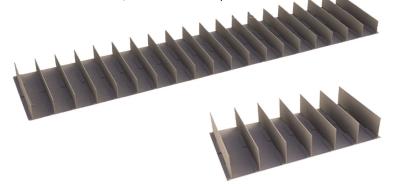

WALLTEC and WT-FLEXIPAC offers a unique and well proven solution that solves your problems with labour intensive and expensive packing! The FLEXICOMB CONCEPT is developed and produced with focus on making a flexible and environmentally friendly product. This without excluding the importance of price, reliability, simplicity and of course quality!

## Note!

Manufacturers of extruded profiles together with their customers and sub-suppliers have major problems with today's packing processes. For example, it is labour intensive, too low stability and the fact that profiles are not separated when packed and during transport.

Short series puts high demands on flexibility and short turnaround times when packing the profiles. Long series requires easy handled and reliable packing inserts. Whether the profiles are produced in long or short series, the **FLEXICOMB CONCEPT** is very cost efficient!

With **FLEXICOMB** the products will be protected (separated from each other) and stabilized with a minimum of space needed. This can be in profile baskets, on pallets or in a cardboard boxes.The **FLEXICOMB** makes it easy for your staff to pack fast and efficient - without scratches, dents or "Black spots"!

## Your needs!

The **FLEXICOMB** can be produced with different set-ups, paper qualities and types, all according to your needs! The **FLEXICOMB** CONCEPT gives maximum flexibility for single tailor-made combs as well as for series and longer runs. No set-up time between different sizes and configurations. All made in the same machine and very cost efficient!

## **Economic production**

- flexible financing
- time saving
- low manning
- no return of damaged goods (goodwill)
- no return of damaged goods (direct cost)
- just-in-time production
- flexible production (sizes and number of)
- reliable production
- less freight costs
- reduced storage of packing material
- user friendly

## **Eco-friendly production**

- less freights (no return of damaged goods)
- less freights (packing material)
- recycled packing material
- non-toxic glue
- minimum of space needed
- combs produced when needed, i.e. less storage and just-in-time

As standard the **FLEXICOMB** is made of a recycled paper and a non-toxid hot melt glue. This makes the **FLEXICOMB** environmentally friendly.

Minimize claims of damaged goods!

#### **"FLUORESCENT TUBES" AND CIRCULAR PRODUCTS**

The **FLEXICOMB** gives you stable packages. Round items can be very difficult to pack on top of each other. The walls on each comb will support the next layer and enhance the stability during transport and storage.

#### **SENSITIVE SURFACES**

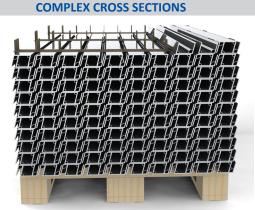

There are fragile and sensitive parts, surfaces and products that need to be protected during transport and storage. The **FLEXICOMB** can be used for protection in many different ways, e.g for round profiles.

#### STABLE AND VOLUME REDUCING

**FLEXICOMB** makes your products become more stable during transport and storage and at the same time it normally reduces the total packing volume. The combs can be tilted, for example when packing bottles.

The FLEXICOMB gives maximum protection and minimum scrap as they can be designed and produced according to your exact needs.

The **FLEXICOMB** can be used in many different ways. Some profiles and parts can be very difficult to pack depending on its cross section. The comb is flexible and can be angeled during packing and sometimes you can pack two parts in the same "rack".

TAILOR-MADE PACKING

Tailor-made combs are used together with pallets, profile baskets, cartons, etc and for most types of material and products that has to be protected and fixated. Long or short, thin or thick, and mixed goods can easily be protected with the **FLEXICOMB**.

#### **PROTECT YOUR VALUES**

Maximize protection, stability and profit!

## FACTS WALLTEC AND WT-FLEXIPAC AB

#### **OUR OFFERS**

- Buy machine(s).
- Service and spare parts
- Consumables sutch as paper and glue
- Special solution

#### Background

WALLTEC is a Swedish company with over 50 years of experiance in the packaging machine development business. FLEXIPAC 5000 was originally developed and patented by WALLTEC and are delievered and installed at well known aluminium companies in Europe and Asia.

#### **Business Idea**

To provide efficient automation and environmentally friendly solutions and aid's for packaging primarily aluminum profiles and parts.

#### Vision

We will create innovative and environmentally friendly solutions to streamline our customers' handling of the packaging process.

#### Mission

We want to give all our potential customers the opportunity to pack their products in an environmentally-friendly and efficient way.
